Comments/Ideas/Suggestions worth Sharing:

- Use Remind.com for maintaining regular communication with your students
- Tap into free Penn State Resources – every Wednesday evening 7-8pm
- Use videos to engage the students – find them on YouTube
- Lots of great discussion boards to use
- Use drag and drop activities; have students record themselves practicing skills (like washing hands) and send videos to you
- Use power points and embed videos and test questions throughout
- Students seem to like using Google slides and you can typically tell as a teacher if the student is understanding the underlying concept by how they work with the slides
- YouTube also has great instructional videos for teachers – how to use Power Point with voice overs
- Insert podcasts into your learning platform – have you students listen to them and then respond to discussion questions afterwards
